

- Discord Meeting:
 - Final stretch for Sprint 2:
 - As we near the end of the sprint, we decided to start up our daily check-ins again to ensure that we are all on the same page and can step in to help when needed.
 - Daily check-in:
 - Tara: Finished everything for this sprint except for one bug fix that will be finished tomorrow. For tomorrow, I'm going to do that bug fix and start helping Kelly with her endpoints. Since she is done, she'll step in to help wherever needed, such as with endpoint 169 and Jenkins.
 - Qiwen: Currently working on the mobile app to allow users to delete posts, add comments, delete comments, and fetch comments. However, there was an issue where, after deleting a comment, the activity becomes null, and it's becoming difficult to find a workaround to ensure that the fragment and its context are properly maintained after the deletion. Also not sure if Jenkins will be set up for next week, some support would be appreciated.
 - Kelly: Finished the bug fix blocking my progress for mobile refactoring. Currently working on the endpoint listed in #159. Notified Tara prior to this update, but also have a rough layout of the second endpoint (#169). Plan to get these implemented by tomorrow so that testing can be our priority and then resume working on the mobile friendship management functionality.
 - Cynthia: Yesterday, she managed to get most of the view done for diary entries on mobile. Adding the friends' diaries should be a lot faster since I've set up all the helper methods needed. Had to add a bunch of stuff to the CardListHelper and CardListAdapter so that they could also work with how the diary entry endpoints are set up. Once this is done, going to prepare outlines for mobile and the website for adding friends' diary entries so that they're ready to go for when Tara & Kelly are done the #169 endpoint.
 - UI transition problems:
 - Sometimes the mobile UI doesn't update the main thread as expected, and was causing some issues in multiple locations.

- Cynthia took a look and was able to find a solution. After pushing the change, it ended up working and unblocked the team!
- Bug fix to go back and forth:
 - Tara was able to finish the functionality for the paging back and forth buttons, allowing for us to be able to load previous posts instead of only being able to go forward.
 - There were some issues with how the times were being sorted from newly-created posts, but that was resolved, allowing us to merge it into dev.
- Sprint 3 Discussion:
 - We need to schedule our meeting for the end of sprint 2:
 - Wednesday next week (the 6th of November) would probably be best.
 - Commitments:
 - Fully complete Hidden Achievement System feature.
 - Finish Interaction with Posts feature (upvotes and downvotes) then help with achievement features along with finishing up any bugs that may be remaining.
 - We're hoping to drop our two trimmable features, but we're confident that we'll be able to convince Rob that we don't need to implement those.
- **Action Items:**
 - Continue doing our daily check-ins so we're all collaborating on this together.
 - Focus on finishing the remaining endpoints.
 - Focus on testing those endpoints.
 - Finish the remaining Sprint 2 tasks.
 - Finish documentation for Sprint 2.
