

- Discord meeting:
  - All feature development has been completed, only bug fixes remain
  - We'll use our dev environment deployment for our demo recording as there are still some bug fixes that need to go into dev before it can merge with main
    - We'll pre-record our demo for the final presentation and turn them into GIFs
  - Increase lambda memory size to increase response time for the demo
  - We might need to scrap the A+ feature since none of us have time to implement it
  - A bug was found on the website where the user is returned to the first page of posts if the vote on a post on another page of the home page
  - Remove notifications on the website for outgoing pending friend requests
  - The slide templates we wanted to use for the final presentation need to be paid for, so Kelly found some new ones that match the vibe of the previous ones
  - Cynthia has been updating the test environment to test datetime formatting and time zone conversion issues for a bug fix
  - Qiwen attempted to convert the website code to a desktop app, but there was too much to change/fix with it that none of us had time to do so it was scrapped
- Action items:
  - Put together final presentation slides - Cynthia and Tara
  - Continue fixing bugs
