

- Discord meeting:
 - We will use the test environment for load testing for the worksheet
 - We ran a limited number of threads due to the cost of a high-scale load test
 - The time zone conversion issue was fixed by removing the conversion altogether and sticking with using only UTC time
 - This changed how some things were implemented
 - The endpoints getDiariesByUser and getDiariesByFriends needed the datetime input to be 12am of the current date converted to UTC time
 - The endpoint CreatePost would limit users to one diary entry per 24 hours, though this started at 12am UTC and ended at midnight UTC instead of local time
 - All tests pass in the pipeline now!
 - Merge dev into main and create a release before the meeting
 - There were some brief issues with the main deployment for the website, but this was resolved by invalidating caches
 - Peer review and course review surveys are out on UMLearn
 - They close on December 9th at midnight
- Action items:
 - Sprint 3 worksheet
 - Security test - Tara
 - Load test - Qiwen
 - CI/CD - Kelly
 - Thoughts - Cynthia
 - Build and deploy project in production environment
