- Project work & Demo
  - DEV: https://dezluqsjxnkgt.cloudfront.net/dashboard
  - Mobile (Kelly's phone)
  - Features to walk through:
    - Profile management
      - Sign up + verification
      - Sign in
      - Account settings (password reset)
      - Send friend request
      - Accept friend request
      - Decline friend request
      - Unfollow a friend
    - Post creation
      - Create post
      - Discard post
      - See global post update
      - See my post update
- CI/CD Pipeline
  - Proof of Rob's email:
    https://outlook.office.com/mail/deeplink?exvsurl=1&ItemID=AQMkAGU5NjhmYTgxLWIwZDMtNDhmMy04MzA3LTdmNzhjZGUwODllNwBGAAADMzaoVn2Nl0%2BHDgXId1FpGgcAmFoa94KDrk%2Bji%2BvafFq%2FkQAAAgEMAAAAmFoa94KDrk%2Bji%2BvafFq%2FkQADKPXiiAAAAA%3D%3D

- Worksheet
  - https://github.com/KageSilver/yAPP/blob/sprint%232_issue%2384-87-mobile/Documentation/Sprint%201/Sprint%201%20Worksheet.md

Minutes:
- CI:
  - He wants us to go over it for the next sprint.
- Sequence Diagrams:
  - He wants us to update the markdown file with the sequence diagrams to say that the diagrams are consistent across both front ends.
  - He wants us to keep the vocabulary consistent across the features in the upcoming sprints (so Tara will just keep working on them probably).
- Issue tracking:
  - Were our time estimates accurate?
    - Cynthia did a great job explaining <3
  - What was the bug fix reporting process?
    - Cynthia also killed it to explain this portion.
    - Piece of advice: he would like to have some comments in the bug fix process for the issues on github. It'll probably be good to do it on other tasks.
  - Documentation tab:
    - He said we did very good. Hell yeah Cynthia!!
    - We might want to add a task for sequence diagram updates since we probably need that.
  - Release:
    - "Yeah it's fine."
  - High Priority:
    - Show us high priority tasks.
  - Features:
    - They had multiple user stories assigned to them. "This is good"
    - He would like some more descriptions in the user stories and features, and dev tasks.
  - Meeting Minutes:
    - We should be meeting once a week, apparently the daily checkins aren't enough.
    - We haven't uploaded our most recent meetings and he doesn't like that.
    - **He wants the meeting minutes to be in different sprints.**
      - HE WANTS TWO PER SPRINT.
    - He gave us full marks with a note to us to make sure we do it.
    - He would like to have a set format.
      - Who was there,
      - What was discussed,

- How long was it?
  - Documentation - Architecture:
    - He just wanted to see the diagrams.
    - Key class components:
      - "That's fine."
  - Documentation - Getting started:
    - Database:
      - He was asking if he needed to start up the database himself to be able to use it, but by us using AWS databases, we can only use our AWS profiles. So we had a section mentioning that you could duplicate the environment without the profile.
  - API Documentation:
    - What is the output?
      - He wants to see what the expected output is. Claims it is the most important part of the documentation, but this was not communicated well at all.
      - It will be nice for Rob to provide an example of this, then, or at least cover a section in class.
      - We need to think of it as if third-party developers are using it.
      - "General industry advice." Keep it uniform.
  - At least 30% finished:
    - Cynthia killed it by explaining that the website was fully finished and that the mobile app was basically finished.
    - The profile management feature was at 80% and as it was the largest, it is quite a bit more than 30% of our project, along with the posting feature being 100% complete.
  - Website demo:
    - He wanted Kelly to use his email instead of one of hers...
    - Kelly killed it even with all of the issues that popped up.
    - He wanted to mark the profile feature as incomplete.
    - He's disagreeing with the naming of our feature.
    - Fix the friends bug for the next sprint.
    - Posting bug spilling out of the text box since we had to switch to main.
  - Worksheet was good.

Commented [1]: Which is so stupid. This doesn't add anything important to the meeting minutes. If he would've let us talk, he would've known that we're really methodical about our approach in meetings.

Commented [2]: Yeah I think he thought that we'd fake the verification process. Which! Is soooo awesome to feel

Takeaways for Sprint 2 (from him):
- Wants us to have a template for meeting minutes to be uniform.
- Doesn't want obvious bugs.
  - Wants it to be very high quality.

Takeaways going forward (from me):
- We have done a lot of really cool shit and we shouldn't feel bad because of it. Keep on trucking!
- Sequence Diagrams will be created for each sprint.
- Architecture Diagram will be updated for each sprint.
- API Endpoints will be updated for each sprint with a body.
